

AI Civic Issue Mapper – Complete Project Task Plan & Team Work Division

This document contains the complete development plan for the AI Civic Issue Mapper government-style portal. It includes all project modules, development tasks, and clear work division among three team members: Frontend Developer, Backend Developer, and API/Testing & Integration Developer.

1. Project Planning & Setup

- Define project objectives and scope
- Create project repository
- Decide tech stack (HTML/CSS/JS, backend framework, database)
- Create project folder structure
- Setup database and initial tables

2. Authentication System

- User registration page
- User login page
- Google login integration
- Session handling
- Logout system
- User profile page

3. Citizen Dashboard

- Dashboard UI design
- Display user profile information
- Show complaint history
- Display complaint status

4. Issue Reporting System

- Create issue reporting form
- Allow image upload
- Location selection or map pin
- Category selection (road, garbage, water, etc.)

- Store complaint in database
- Generate complaint ID

5. Issue Tracking System

- Complaint tracking page
- Display complaint status
- Allow users to view submitted complaints
- Status update display (Pending, In Progress, Resolved)

6. Map Visualization

- Integrate map API
- Display complaints as markers
- Use color markers based on status
- Show issue details when clicking marker

7. Admin Dashboard

- Admin login system
- View all complaints
- Filter complaints by category or status
- Update complaint status
- Assign complaint to department
- Delete invalid complaints

8. AI Image Classification

- Collect sample dataset
- Train image classification model
- Detect issue type from uploaded image
- Integrate AI model with backend

9. Notification System

- Send notification when complaint is submitted
- Send notification when complaint status changes
- Email or in-app notification system

10. Analytics Dashboard

- Total complaints counter
- Pending vs resolved chart
- Most common complaint categories
- Area-based complaint statistics

11. Testing

- Frontend UI testing
- Backend API testing
- Database testing
- Bug fixing
- Performance testing

12. Deployment & Documentation

- Prepare final documentation
- Create project report
- Deploy application on server
- Prepare presentation and demo

Team Work Division (3 Members)

Team Member Role	Main Responsibilities
