

AI Civic Issue Mapper – Project Task Plan & Team Work Division

This document outlines the development tasks for the AI Civic Issue Mapper government-style portal project. The tasks are organized by module and divided among three team members to ensure efficient collaboration.

1. Project Setup

- Create project repository (GitHub or similar)
- Define folder structure for frontend and backend
- Set up development environment
- Create initial database schema

2. Authentication System

- User registration and login
- Google login integration
- Session management
- User profile page

3. Issue Reporting Module

- Form for reporting civic issues
- Image upload feature
- Location selection
- Issue category selection

4. Issue Tracking System

- Generate complaint ID
- Store issue details in database
- Track issue status (Pending, In Progress, Resolved)
- User complaint history page

5. Map Visualization

- Display reported issues on map

- Color indicators for issue status
- Location markers for issues

6. Admin Dashboard

- Admin login
- View all reported issues
- Update issue status
- Assign issues to departments

7. AI Module

- Image classification model
- Detect issue category from uploaded image
- Integrate AI model with backend

8. Notification System

- Notify users when issue is submitted
- Notify when issue status changes
- Email or in-app notifications

9. Analytics Dashboard

- Total number of complaints
- Resolved vs pending issues
- Area-based issue statistics

10. Testing and Deployment

- Test all modules
- Fix bugs and optimize performance
- Prepare project documentation
- Deploy the portal

Team Work Division

Team Member	Responsibilities
-------------	------------------

Member 1 – Frontend Developer	User interface, login pages, report issue form, map UI, user dashboard
Member 2 – Backend Developer	Database design, APIs, authentication system, issue storage, admin dashboard
Member 3 – AI & Integration	Image classification model, AI integration, analytics, testing and deployment support
